

SCANNING IDS EXHAUSTING YOU?

MEET TURBO MODE

We have a new update for your barcode scanner. This should allow IDs to be scanned much quicker.

Print this page and scan the barcode with your barcode scanner.

You can try scanning from your phone, just have your brightness to 100% and make sure the barcode below is zoomed in to at least half of your screen. Have your phone screen facing down and barcode scanner pointed up at it to reduce glare from lights on your phone screen.

KBDTMD1.

Turbo Mode On

There are certain models that might not work with this, so if you turn on **TURBO MODE and it stops scanning your IDs, then please scan the barcode below to turn off **TURBO MODE**.**

KBDMDO.

*** Turbo Mode Off**
